Sierra's Virtual Bookshelf

Background

I have seen people build tiny replicas of their bookshelves using wood and paper. I decided to take this idea in a virtual direction.

Design Objective

Create an interactive website using CSS, HTML, and Javascript in order to enhance my coding and project development skills.

Key Features

Users can click on the book images to see more about the title, author, and genre of the book.

Future Work

An option for users to add their own books and create their own customizable profiles.

Final Design

Bookshelf

Books

An interactive website where book images can be dragged and dropped onto a bookshelf to replicate a real life shelf.

Built With

- Visual Studio
